*AGS additional front tank*

# 1500 F

*1500l*

The Agromehanika **AGS 1500F** front tank with a capacity of **1500 liters** is not just an ordinary tank with added volume. It offers innovative functionalities that go beyond mere capacity expansion. When combined with AGS mounted sprayers, it can achieve a total volume of approximately **2500-2700 liters**, making it a serious competitor to trailed sprayers. It provides a comprehensive weight distribution solution that ensures **optimal stability** for your tractor. Managing the front tank is incredibly easy, thanks to the **electric motor valves** that you can operate directly from the tractor's cabin. For pumping and mixing, it is equipped with its own **BM150 pump with hydraulic drive**.

SINCE 1968

## The AGS 1500 F front tank offers three possible uses:

- Increasing the capacity with the **same spraying agent** without the need to stop during spraying, as you can transfer the agent as needed during operation.
- Using **two different spraying agents**. Different agents can be mixed in the rear and front tanks.
- Using the front tank solely as a **clean water reservoir for later use** in another field or crop.

There is also an option to purchase the front tank **without a pump**, intended solely as an additional water reservoir. In this case, the **sprayer's pump takes care of the transfer**.

AGS		1500 F	1500 F additional
Tank capacity	l	1500	1500
Clear water tank capacity	l	100	100
Hand wash tank volume	l	10	10
